

# PARADISE DENTAL TECHNOLOGIES

## Montana Explorer™

If you know Montana Jack® then it is time to go exploring! The Montana Explorer™ uses the same distinct contra-angles as the Montana Jack®. It is also 100% made in the USA by PDT, Paradise Dental Technologies.

The Montana Explorer™ has the perfect contra angle for the most universal adaptation of all diagnostic designs! In the anterior, the instrument adapts to provide a more favorable handle position allowing greater visibility and is not as close to the patient's face as compared to the competitors leading diagnostics instruments. Practitioners also report that Montana Explorer™ accesses throughout the posterior with less ergonomic stress and more patient comfort. The ease of adapting this PDT designed instrument is a direct result of the instruments lightweight design.

The Montana Explorer™ durable spring tip provides convenient interproximal access with its very thin sickle curvature. Tensile strength and flexibility is maintained giving the practitioner better feel for decay and tooth irregularities.

The The Montana Explorer™ features a solid resin handle that allows for the ultimate tactile sensitivity. Weighing in at only 11 grams it is one of the lightest instruments on the market. The comfortable large diameter handle has extended knurling for superior control and torque.

The combination of these features has made the The Montana Explorer™ the new must have instrument for hygienists and Dentists.
